May, 2016

Application Definition

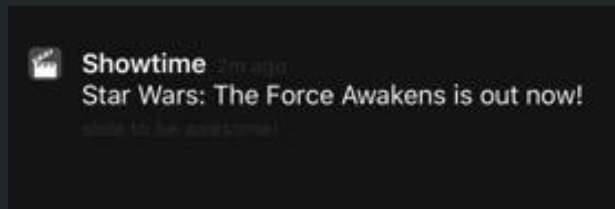

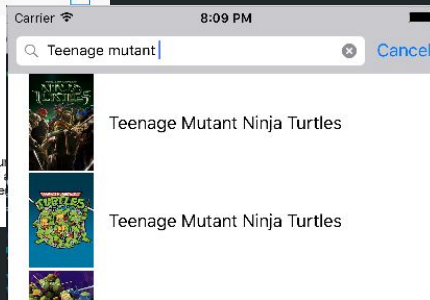

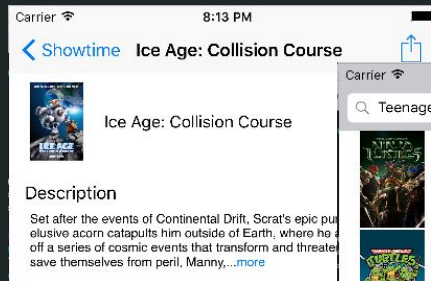

- A simple **personalized show and movie guide** that will help you keep updated with all of your favourite shows and movies.

Features

- Search show/movie
- Add show/movie
- Remove show/movie
- Notification system to remind user when the show/movie is airing
- View show's/movie's basic information
 - > episode's or movie's overview
 - > rating, genre
 - > release date and time, runtime

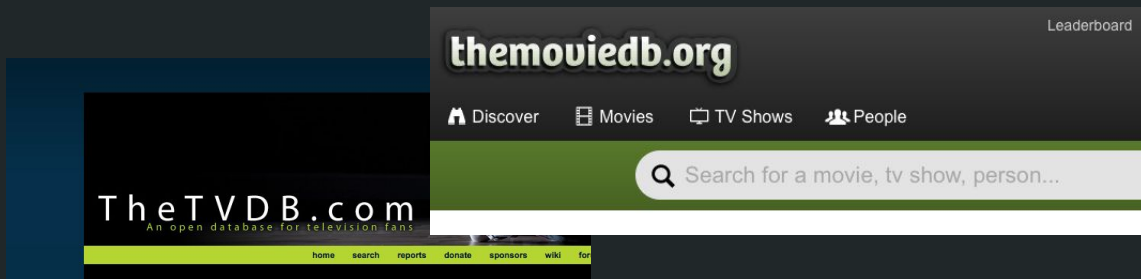

The Idea

- A **long wait** between new episodes or the movie release date
- Sometimes you're just **too busy to remember**
- Helps to decide or remind you **what to watch**
- Get **informed** about the show or the movie
 - > information such as an overview or release date and time
- Something **simple** without unnecessary features - **easy to use**

Technical Challenges

- Finding **APIs** with all needed information about the movie or the show
 - > The TVDB - <http://thetvdb.com>
 - > The MovieDB - <https://www.themoviedb.org>
- Working with third party libraries

Future Extensions and Risks

- Social networking features
 - > share with friends

- Storing user information on the cloud
 - > ability to synchronize user information to multiple devices
